Ex. 5 Deliberative Process (DP)

§ 60.5430a What definitions apply to this subpart?

Well site means one or more surface sites that are constructed for the drilling and subsequent operation of any oil well, natural gas well, or injection well. For purposes of the fugitive emissions standards at § 60.5397a, well site also means a separate tank battery surface site collecting crude oil, condensate, intermediate hydrocarbon liquids, or produced water from wells not located at the well site (e.g., centralized tank batteries).

Some additional information:

The compressor station is between wellsite segment and processing. Specifically, gas from many wellsite locations is routed to this facility for treatment. At this facility, there was compression, an amine unit and glycol dehydration. Now that compression is gone, it is only amine treatment and glycol dehydration. Gas leaves and is sold. I would imagine it goes downstream for further processing.

Karen-

If a facility is applicable to the leak detection under 0000a is subject as a compressor station, and all compressors get removed, is the facility no longer subject to the leak detection portion of the rule since the site is technically no longer a compressor station.

Thanks!
